EMPLOYMENT HISTORY

Developer, Conscia Corporation

JANUARY 2017 - MARCH 2017

- Helped build front-end of big data application using React.js, Flux, Webpack, Redux, etc.
- Did contract work while full time student

Founder, EventBold, Inc.

JANUARY 2016 - FEBRUARY 2017

- Developed EventBold to make conferences with an application easier to setup online. Focused on private small conferences that could setup a Wix website. To increase user growth, created a full REST API for organizers and provide a free Android application upon request.
- Launched EventBold Live; allows private/public live streaming using BitMovin and Amazon Web Services.
- Developed automated test code with Selenium to test the product.
- Grew awareness by running marketing campaigns and reaching out to Queen's conference coordinators.

Founder, Expedition Labs Ltd.

JUNE 2015 - PRESENT

- Originally incorporated to work with clients while doing freelance projects.
- Developed WorkingInToronto.com and WorkingInOttawa.com; Google for job postings in Toronto/Ottawa. Created a bot that finds job postings around the internet.

Business Technology Analyst, Deloitte

JANUARY 2016 - APRIL 2016

- Developed two internal Android applications. The applications provided the sales team with dynamic information and an internal chat system to connect with the sales lead for a specific topic. Both are on my Github and I have video demos of them.
- Taught seven team members about Android development.
- Worked with my team and our client to determine requirements for a project using Agile methodologies.
- Developed a proof of concept for an Android application that was presented to the client.

Automation Software Tester, BlackBerry

MAY 2015 - DECEMBER 2015

- Contributed to the BlackBerry Hub, BlackBerry Service, BlackBerry Calendar, and BlackBerry Contacts for the BlackBerry Priv (Android).
- Implemented over 150 test cases to ensure the quality of Personal Identification Management (PIM) applications.
- Automated over 200 manual test cases with UiAutomator (Android test framework) to decrease the time spent on regression testing.
- Worked on a large code base with various branching strategies using Git, Jenkins, and Gerrit.

EDUCATION
